ST. LOUIS, MO.

Plant Only....

NORTHERN GROWN STOCK

IT IS HARDIEST, MOST THRIFTY
AND HAS MOST VITALITY

All Stock. In this list is grown in our nurseries at Lakeland, Minn. (the most northern in America), and guaranteed to be strictly first class and of the grade as specified.

Terms. When orders are accompanied by cash no charge will be made for boxing or baling, except on large trees of 2 to 2½ inches in diameter and above, sold in less than carload lots.

Orders not accompanied with cash are to be paid for upon delivery of stock, and an extra charge will be made for boxing and baling. Stock is delivered on board cars at our nurseries.

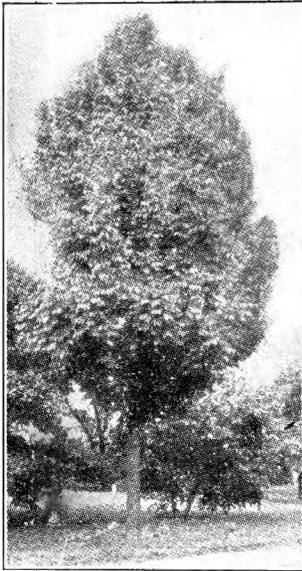

Landscape Gardening. We will be pleased to consult with parties interested in them out and carrying out in detail the work necessary for beautifying them. Our experience of a quarter of a century in work of this class gives us the advantage over local gardeners, who do not have the wide and practical experience necessary for good work. We are prepared, in addition to furnishing all kinds of trees, shrubs and bedding plants, to carry out plans for grading, road making, planting and remodeling of unsatisfactory places, having skilled engineers to give the best of service, and will be pleased to correspond with anyone needing the services of a landscape architect.

Catalog Free. Our handsomely illustrated catalog containing complete list and descriptions of all the leading varieties of **Trees, Shrubs, Vines, and Fruits, Plants and Seeds**, will be mailed free upon application.

Order Early To be sure of obtaining what varieties are desired, as orders are filled in rotation. Write for prices on anything you may not find in the list.

L. L. MAY & CO.

Nurserymen, Florists and Gardeners,

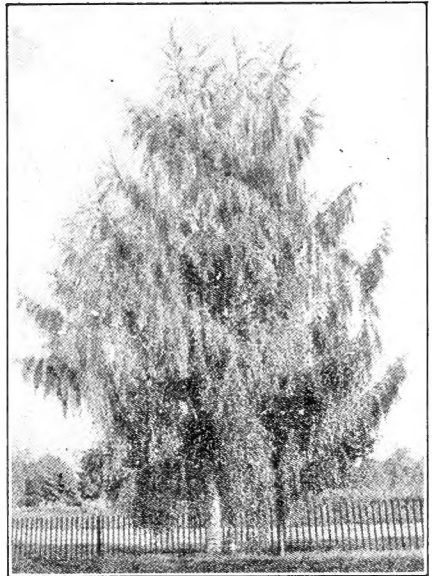

White Ash.

White Ash—A valuable variety of rapid growth, forming straight clean trunks and broad oval shaped heads. Desirable for parks, public grounds and street planting, also for timber and forestry purposes.

Birch, Cut Leaf

This is one of the most beautiful and desirable trees for the lawn ever introduced. The branches are of graceful drooping habit, with foliage delicately cut and very fine. The bark is silvery white, forming a beautiful contrast with the foliage. It makes a rapid growth and is perfectly hardy in all sections of the country. Mr. Scott, in his "Suburban Home Grounds," says of it: "No engraving can do it justice; like the palm trees of the tropics, it must be seen in motion, swaying in the lightest breeze, its leaves trembling in the heated summer air, its white bark glistening through the bright foliage and sparkling in the sun to enable us to form a true impression of its character."

Cut Leaf Birch.

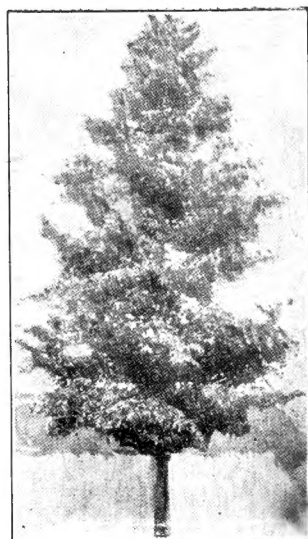

and sparkling in the sun to enable us to form a true impression of its character."

European White Birch.

European White Birch—A distinct, native species of vigorous, rapid growth. Bark white, leaves triangular, tapering and pointed.

Weir's Cut Leaf Maple.

Weir's Cut Leaved Silver Maple, A.—It is a variety of the silver leaved, and one of the most remarkable and beautiful trees, with cut or dissected foliage. Its growth is rapid, shoots slender and drooping, giving it a habit almost as graceful as the Cut Leaved Birch. The foliage is abundant, silvery underneath, and on the young wood especially deeply and delicately cut. The leaf stalks are long and tinted with red on the upper surface. It ranks among the most interesting and attractive lawn trees, and may be easily adapted to small places by an occasional cutting back, which it will bear to any degree necessary, as well as a willow.

Silver or Soft Maple.

One of the most rapid growers, and valuable where immediate shade is required; forms a very large and compact head; its leaves are somewhat cut and are silvery beneath; does well in all soils and adapted to all climates. This is one of the best trees for driveways, giving immediate effect and having a very graceful habit.

Lombardy Poplar—This is of obelisk form and grows rapidly. It is planted largely in Newport and other fashionable resorts of the East, as it forms a striking feature of any landscape. It is perfectly hardy everywhere.

Avenue of Carolina Poplar.

Carolina Poplar—The most popular tree on the market. Facts are, more of this variety are planted than all other combined, showing its popularity. It is the most rapid growing and best tree for quick results that can be planted; has large, glossy leaves, deep green, and very valuable for street planting, as it stands smoke, dust and gases better than any other. Tree perfectly hardy; should be pruned each year.

STREET OR AVENUE PLANTING.

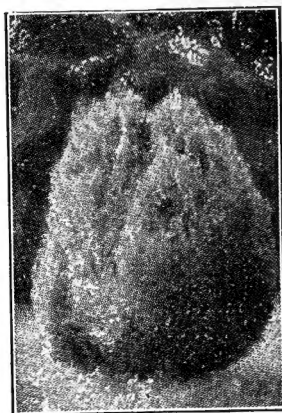

The system in vogue in many places of planting trees, is not to be complimented by those who know the beauty of a tree or an avenue. We give as an illustration an avenue planted to Carolina Poplars. One can see the uniformity of such planting and the beauty it adds to the surroundings. Commonly speaking, each property holder plants when he pleases, what he pleases, and where he pleases, making an unsightly street to one interested in tree culture. You have noticed many times in going through streets, in front of one home will be set Soft or Silver Maple adjoining Box Elder; Box Elder adjoining Elm; Elm adjoining Carolina Poplar, and so on, the full length of the street, and many times the trees out of alignment.

This can be remedied by the property holders selecting some variety of street tree, and have these all planted at one time.

EVERGREENS.

American Arbor Vitae.

The Trees which we offer here are all nursery grown, transplanted stock.

Arbor Vitae, American—One of the most popular evergreens in cultivation, either for single specimens on the lawn, planted in clumps, or for ornamental hedging. It readily adapts itself to all situations, is perfectly hardy.

Arbor Vitae, Pyramidalis—The most beautiful of all the Arbor Vitae. Forms compact, slender, pyramidal shaped heads of dark green, at all times conspicuous and very ornamental.

Hydrangea, paniculata grandinora—This is the handsomest shrub grown anywhere. It comes into bloom in August when most other shrubs are through flowering. It grows from 8 to 10 feet high, producing great pyramidal panicles of bloom 1 to 2 feet in length and 6 to 12 inches in diameter. The blossoms are at first pure white, turning gradually to a delicate pink. The blooms dry like "Everlasting Flowers." It is hardy as the oak, never kills back and for specimen plants, groups, borders or ornamental divisions it is very beautiful.

Clematis, Jackmanni.

The best of all large flowering varieties. Color a deep violet purple.

Spirea Reevesii, or Lanceolata—A charming shrub with narrow, pointed leaves, and large, round clusters of white flowers that cover the whole plant, and render it exceedingly effective. Blooms in June.

Syringa.

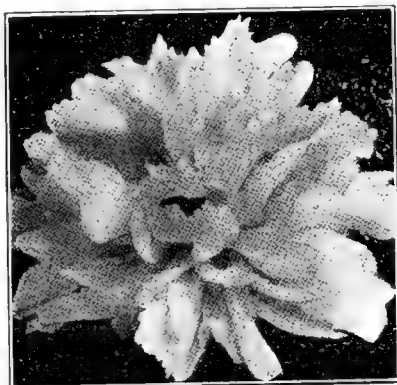

The Syringa is an invaluable shrub. Of vigorous habit, very hardy, with large, handsome foliage, and beautiful white flowers produced in the greatest profusion at the blossoming season, it merits a prominent place in all collections of shrubbery.

Hardy Phlox.

PAEONIES are the noblest and most beautiful of hardy plants, outclassing the Rose in many respects.

☞ **Festiva Maxima**—Early, enormous, very full, shell formed bloom, often 7 to 8 inches in diameter, color snowy white, shaded to delicate creamy white.

Phlox (see cut page 11)—There is no class of hardy plants more desirable than Perennial Phlox. They thrive in most any soil or any position, and can be used to advantage in many different ways, as a hardy border plant or planted in groups. They are a mass of bloom the entire season. The colors, shades and markings are innumerable. Our collection is one of the best in the country, made up of the finest strains that could be produced, which we offer in named varieties or in assortments of named colors.

Platycodon, or Japanese Bellflower.
Large blue flower from July to September.

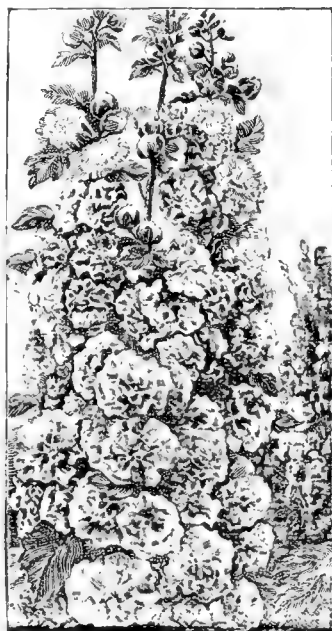

HARDY PERENNIAL PLANTS.

No class of plants will yield better or more pleasing results for the money invested than these Hardy Perennials. They require very little care or attention, are perfectly hardy, and yield a rich harvest of bloom.

They are all showy and beautiful plants, of easy cultivation, and of various seasons of flowering, from May to November. By a judicious selection, a continuous display of flowers may be obtained from early spring to the end of autumn. Parties in ordering will do well to leave the selection to us.

Iris.

Hollyhock—One of the best Perennials and almost indispensable as a background plant for beds or for borders. Their straight long spikes with a mass of brilliant blooms the entire summer make them very valuable.

This is one of the old fashioned varieties that has been improved so wonderfully of late years that it is hardly known, and no wonder it has returned to be so popular. These can be supplied in all shades and colors, having a superb collection.

A Hedge of Rosa Rugosa.

ROSA RUGOSA. This Japanese Rose forms a sturdy bush 4 to 5 feet high, covered with large, dark green, glossy foliage, crowned with terminal clusters of 10 to 12 flowers, each 3 inches in diameter. Perfectly hardy. A valuable plant for the hardy border or shrubberies, its large, handsome fruits being very ornamental all through the autumn and winter months. It also makes a splendid hedge, its foliage being impervious to the attacks of insects of all kinds.

BERBERRY, PURPLE.

This shrub is used for various purposes, being suited for hedging; it is often used in this manner, also as a decorative shrub, having a foliage of deep violet or purple. It makes a striking contrast with golden or green foliage plants when grouped together or is very effective when massed together in a clump. Like Thunbergii, it produces berries which hang into the winter and are effective. It is more stiff and upright in its growth, and is valued as a hedge plant or for division or boundary.

Berberry Thunbergii.

Nothing can take its place as a low ornamental hedge for gracefulness or beauty. Its habit is low and stately; slightly drooping, and forms a hedge as broad as it is high. It has every good quality—beautiful habit, fine foliage, free-flowering qualities—but its greatest charm is the great quantities of crimson berries which it produces in the summer, and which remain on the bushes all winter, making it very effective in the winter landscape. It is also fine for cutting for house decoration, almost equal to the rose.

MINN.

Buckthorn Hedge at Our Nurseries—Three Years Planted.

Buckthorn (*Rhamnus Catharticus*). After thorough tests we find this meets every requirement of the Northwest; perfectly hardy, a good grower, stands our severe winters unprotected without any signs of damage. The illustration given shows a driveway planted on both sides leading into our nurseries at Mayfield. This hedge has been planted three years; it is dense and compact as the illustration shows; should be planted in double rows, plants one foot apart and the rows one foot apart, breaking the joints so the plants are not opposite each other. We recommend this when a formal effect is wanted along highways, or when the grounds will stand a stiff hedge.

**Northern Grown is
the Best Guarantee**
